Venus eye boutique

Edmonton designed eyewear tells a story

Since its inception in 2001, Venus Eye Design has exploded into Canada's optical industry by providing consumers with distinctive and flattering eyewear designs. Owner and designer Mike Christiansen prides himself on being 100% Canadian and one of only a handful of Canadian eyewear designers, the only one from Alberta. Based in Edmonton, Venus frames can be found in over 1000 independent optometrists and optical stores across Canada. With six distinctly different lines and over 300 different styles, Venus offers the perfect frame for every preference at any age. The collection includes multi tone laminates, pressed aluminum metal frames

and the award winning children's eyewear line Q-T pie - cool, fun, miniature versions of mom and dad's trendy frames. The brand new LIMITED EDITION sunglass line was produced in limited numbers to ensure exclusivity and are flourished with stunning details. Venus Eye Design stands out in a marketplace of ineffective eyewear styles by using color and details to add elements of uniqueness to its frames. Venus Eye Boutique opened on Ellerslie Road in south Edmonton as the flagship store in October 2007. This unique boutique showcases the ENTIRE Venus collection as well as an unsurpassed section of one of a kind designed prototypes that were never put into mass production.

These individual frames are meant for the person who wants to be unique and one-of-a-kind as they cannot be found anywhere else!

Venus Eye Boutique offers comprehensive eye exams by an optometrist, eyewear consultations by trained industry professionals and the chance to meet with an eyewear designer and discover what has been designed for your specific needs.

Designer Mike Christiansen sums up the Venus philosophy the best, "Our designs both set and push the trends, but not to the point that they are too bizarre for the typical, style-conscious consumer. We see Venus frames on women, men and children who not only want to see well but also want to be seen. Your face is the first place people look when they meet you, shouldn't your eyewear say something about who you are? That's what each Venus frame does, it tells your story."
